

FHU PRECISE DAY

 **12 October 2023**

 **9:30 - 16:00**

 **University Hospital of Lille**

Do you work for a company, a research laboratory, or a healthcare team that specializes in chronic inflammatory diseases?

The clinical and research teams of the University Hospital Federation PRECision health in Complex Immune-mediated Inflammatory Diseases ([FHU PRECISE](#)) are pleased to invite you to an open innovation day focusing on chronic inflammatory diseases and the FHU's collaborative opportunities!

Chronic inflammatory diseases, also known as IMIDs (Immune-Mediated Inflammatory Diseases), are common and on the rise in France, particularly in the north. The current challenge is to effectively manage IMIDs that are resistant to treatment and/or present complications as a result of these treatments or disease progression.

FHU PRECISE is committed to addressing this challenge and revolutionizing IMID management. We hope to provide these patients with the most recent advances in care, research, and education. We take advantage of the G4 academic environment's richness (including centers in Lille, Amiens, Rouen, and Caen) as well as our well-structured relationships with pharmaceutical companies.

Program :

9h30 - 10h00 : Welcome coffee

10h – 10h05 : Opening remarks, Professor David Launay

10h05 – 10h15 : Round table
